

Exit Ticket - Traversal Algebra (1)

1. $\angle 2 = 88^\circ$ $\angle 6 = 4x^\circ$. Solve for x .
2. $\angle 3 = (10x + 20)^\circ$, $\angle 5 = (8x + 20)^\circ$. Solve for x .
3. $\angle 6 = (x + 2)^\circ$, $\angle 3 = (3x - 12)^\circ$. Solve for $\angle 3$.
4. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (2)

1. $\angle 2 = 44^\circ$ $\angle 6 = 2x^\circ$. Solve for x .
2. $\angle 3 = (5x + 10)^\circ$, $\angle 5 = (4x + 10)^\circ$. Solve for x .
3. $\angle 6 = (x + 28)^\circ$, $\angle 3 = (2x - 12)^\circ$. Solve for $\angle 3$.
4. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (3)

1. $\angle 2 = 90^\circ$ $\angle 6 = 3x^\circ$. Solve for x .
2. $\angle 3 = (x + 11)^\circ$, $\angle 5 = (4x - 10)^\circ$. Solve for x .
3. $\angle 6 = (3x + 28)^\circ$, $\angle 3 = (8x - 12)^\circ$. Solve for $\angle 3$.
4. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (1)

5. $\angle 2 = 88^\circ$ $\angle 6 = 4x^\circ$. Solve for x .
6. $\angle 3 = (10x + 20)^\circ$, $\angle 5 = (8x + 20)^\circ$. Solve for x .
7. $\angle 6 = (x + 2)^\circ$, $\angle 3 = (3x - 12)^\circ$. Solve for $\angle 3$.
8. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (2)

5. $\angle 2 = 44^\circ$ $\angle 6 = 2x^\circ$. Solve for x .
6. $\angle 3 = (5x + 10)^\circ$, $\angle 5 = (4x + 10)^\circ$. Solve for x .
7. $\angle 6 = (x + 28)^\circ$, $\angle 3 = (2x - 12)^\circ$. Solve for $\angle 3$.
8. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (3)

5. $\angle 2 = 90^\circ$ $\angle 6 = 3x^\circ$. Solve for x .
6. $\angle 3 = (x + 11)^\circ$, $\angle 5 = (4x - 10)^\circ$. Solve for x .
7. $\angle 6 = (3x + 28)^\circ$, $\angle 3 = (8x - 12)^\circ$. Solve for $\angle 3$.
8. Dezmond says that if two angles are consecutive interior angles, the x 's in each angle's expressions add to 180° .

Do you agree? **Explain your reasoning.** Use the back.

Exit Ticket - Traversal Algebra (1)

9. $\angle 2 = 88^\circ$ $\angle 6 = 4x^\circ$. Resolver para x.
10. $\angle 3 = (10x + 20)^\circ$, $\angle 5 = (8x + 20)^\circ$. Resolver para x.
11. $\angle 6 = (x + 2)^\circ$, $\angle 3 = (3x - 12)^\circ$. Resolver para $\angle 3$.

12.

Dezmond dice que si dos ángulos son ángulos interiores consecutivos, las x en las expresiones de cada ángulo se suman a los 180° .

¿Estás de acuerdo? Explique su razonamiento. Utilice la parte posterior.

Exit Ticket - Traversal Algebra (2)

9. $\angle 2 = 44^\circ$ $\angle 6 = 2x^\circ$. Resolver para x.
10. $\angle 3 = (5x + 10)^\circ$, $\angle 5 = (4x + 10)^\circ$. Resolver para x.
11. $\angle 6 = (x + 28)^\circ$, $\angle 3 = (2x - 12)^\circ$. Resolver para $\angle 3$.

12.

Dezmond dice que si dos ángulos son ángulos interiores consecutivos, las x en las expresiones de cada ángulo se suman a los 180° .

¿Estás de acuerdo? Explique su razonamiento. Utilice la parte posterior.

Exit Ticket - Traversal Algebra (3)

9. $\angle 2 = 90^\circ$ $\angle 6 = 3x^\circ$. Solve for x..
10. $\angle 3 = (x + 11)^\circ$, $\angle 5 = (4x - 10)^\circ$. Solve for x.
11. $\angle 6 = (3x + 28)^\circ$, $\angle 3 = (8x - 12)^\circ$. Solve for $\angle 3$.
